

Removing clicks and crackle...

CAM6: Declickle-2™

For more than twenty years, CEDAR Audio has been committed to solving the dual problems associated with declipping and decrackling difficult signals such as brass instruments, solo strings, and human singing.

We have developed many products in our search for the perfect declicker and decrackler, including the award-winning Series 2 and Series X, and more recently the acclaimed Duo Declickle™ processor.

Now, there is Declickle-2™ for CEDAR Cambridge, a combined declicker and decrackler that achieves superior performance across a wider range of material than ever before. Indeed, its performance is so good that it is very rarely possible to hear that the signal was ever damaged prior to restoration.

Simple but effective

Despite performing the jobs of two previously separate processes, Declickle-2™ is extremely simple and intuitive in use. With just three controls, you can ensure that you are always detecting the problems accurately, and removing just these, not the genuine signal. This produces the best possible results with the minimum of fuss and user intervention.

Declickle-2™: The best combined declicker and decrackler in the world
